Address:
Date Signature:

Instruction for the collection of hair sample for DNA TYPING

1. Complete sketch, description and details over page.
2. Prior to collecting hair samples, complete the details on the sample envelope.
3. One envelope for each horse
4. Pull mane hair from above the withers (about mid neck region). Firmly grasp a tuft of 25/40 hairs as close to the skin as possible
5. Pull evenly and directly up and away from the neck so that the hair will tend to come out by the roots rather than break off.
6. Look closely at the ends to ensure the hair roots are resent, use a magnifying glass if necessary. At least half the hair sample should have roots.
7. **Avoid contaminating with hair from other horses.**
8. Collected hair should be **immediately placed** in labeled envelope and sealed (avoid licking)
